(54) GAME MACHINE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a game machine capable of displaying an enlarged image of high quality by reducing the jaggy in the enlargement of a display pattern or the like.

SOLUTION: This game machine comprises a variable mode determination means for determining the variable mode of discrimination information displayed on a variable display device when a preset fluctuation starting condition is satisfied; a variable display control means for controlling the variable display of identification information on the basis of the variable mode determined by the variable mode determination means; and a game control means for imparting a prescribed game value when the variable display result by the variable display control means is in a specified display mode. The variable display control means has the function of switching the discrimination information from a general display to an enlarged display during the variable display, and the variable display control means performs an anti-jaggy processing to the periphery of the discrimination information in the enlarged display of the discrimination information.
